

# Upgrading

Unfortunately, there is no automated process for upgrading an older version of the framework to the latest release. This is due to the fact that newer versions of dependencies may have breaking changes and the code generated by the template will likely have been modified to fit the needs of your site.

The best way to keep your dependencies up to date is to use the [lein-ancient](#) plugin. It will help you easily discover what libraries are out of date and their latest versions.

Build Tool:

## Topics

- Your First Application
- REPL Driven Developme
- Application Profiles
- HTML Templating
- Static Assets
- ClojureScript
- Routing
- RESTful Services
- Request types
- Response types
- Websockets
- Middleware
- Sessions and Cookies
- Input Validation
- Security
- Component Lifecycle
- Database Access
- Database Migrations
- Logging
- Internationalization
- Testing
- Server Tuning
- Environment Variables
- Deployment
- Useful Libraries
- Sample Applications
- **Upgrading**
- Clojure Resources

## Books

Web Development with  
**Clojure**  
2nd Edition  
Build Bulletproof Web Apps  
with Less Code
